STRATEGIC PARTNERSHIP OUTREACH REPORT

1. INTRODUCTION

As part of Epahubb's business development and revenue growth initiatives under Project 50K, a strategic partnership outreach exercise was undertaken to identify potential organizations and technology professionals with whom Epahubb could establish mutually beneficial business relationships.

The exercise focused on identifying potential collaborators whose expertise, products, services and business networks could complement Epahubb's IT consulting and digital solutions services.

The intended outcome was to develop opportunities for technical collaboration, customer referrals, joint projects and other business arrangements that could contribute to revenue growth and strengthen Epahubb's service delivery capacity.

2. OBJECTIVES

The objectives of the exercise were to:

1. Identify and contact at least ten potential strategic partners.
2. Explore possible collaboration opportunities with prospective partners.
3. Identify areas of mutual benefit between Epahubb and potential partners.
4. Develop partnership proposals based on identified opportunities.
5. Identify at least two promising partnership opportunities for management consideration.

3. PARTNER IDENTIFICATION AND OUTREACH

A total of **17 prospective organizations and technology businesses** were approached during the exercise.

Two communication channels were used:

Outreach channel	Number contacted	Response
Email	14	No responses received at the time of reporting
WhatsApp	3	Responses received from all three
Total	**17**	**3 responses**

The outreach communication introduced Epahubb and its technology services and expressed interest in exploring possible strategic collaboration.

The proposed areas of collaboration included software development, IT consulting, digital transformation, technology solutions, business referrals and joint projects.

The use of WhatsApp provided a direct communication channel for engaging individual technology professionals, while email was used to approach other prospective organizations.

4. OUTREACH OUTCOMES

Out of the 17 prospective partners contacted, three responded through WhatsApp, while the 14 organizations contacted through email had not responded at the time of preparing this report.

The three WhatsApp contacts identified for further partnership exploration were:

- Frimpong Tech
- Lord Tech
- Pyro Tech

Their technology-related activities present possible areas of complementarity with Epahubb's services. Further engagement is required to establish their willingness to enter into formal collaboration arrangements and agree on specific terms.

The absence of responses from the 14 email contacts remains an outstanding follow-up activity.

5. PRIORITY STRATEGIC PARTNERSHIP OPPORTUNITIES

Following the outreach exercise, two prospective partners have been identified as priority opportunities for further strategic engagement and management consideration.

5.1 Frimpong Tech – Software Development Partnership

Frimpong Tech is a software development prospect whose principal area of activity is software creation and development. The individual currently operates independently and handles the different aspects of software development projects.

Proposed partnership arrangement

Epahubb can establish a working relationship with Frimpong Tech to provide additional software development capacity when specialised expertise or additional technical support is required.

Potential areas of collaboration include:

- Joint development and implementation of software projects.
- Sharing technical expertise and development responsibilities.

- Engaging Frimpong Tech when Epahubb requires additional software development capacity.
- Referring suitable projects and customers to one another.
- Agreeing on project-based fees and revenue-sharing arrangements.

Strategic value to Epahubb

This arrangement could increase Epahubb's technical capacity without immediately requiring additional permanent staff. It could also allow the company to pursue more development opportunities while maintaining flexibility in project delivery.

Strategic value to Frimpong Tech

The collaboration could provide access to additional project opportunities, a wider business network and support when handling projects that require additional technical capacity.

Priority: High – recommended for management consideration.

5.2 Lord Tech – Hardware Supply and Data Analytics Partnership

Lord Tech operates in the technology sector, with activities including laptop sales and data analytics using Microsoft Power BI.

Proposed partnership arrangement

Epahubb can explore a complementary partnership with Lord Tech, combining Epahubb's IT consulting and digital solutions capabilities with Lord Tech's hardware supply and analytics expertise.

Potential areas of collaboration include:

- Supplying laptops and related equipment for Epahubb clients.
- Referring customers who require hardware and technology products.
- Collaborating on Power BI dashboards and data analytics projects.
- Jointly approaching businesses that require technology infrastructure and digital solutions.
- Exploring opportunities to combine software, hardware and analytics services.

Strategic value to Epahubb

This collaboration could expand the range of technology requirements Epahubb can address, create additional customer referral opportunities and provide access to complementary technical capabilities.

Strategic value to Lord Tech

The arrangement could provide access to potential business customers, referral opportunities and joint project engagements.

Priority: High – recommended for management consideration.

6. ADDITIONAL COLLABORATION OPPORTUNITY

6.1 Pyro Tech – Software Development Collaboration

Pyro Tech has been identified as another potential software development collaborator.

The proposed arrangement would focus on joint software development, technical support, sharing expertise and referring suitable project opportunities.

The relationship could provide Epahubb with access to additional development capabilities and create opportunities for both parties to participate in projects requiring complementary skills.

Priority: Additional technical collaboration prospect.

7. PROPOSED PARTNERSHIP AND REVENUE-SHARING FRAMEWORK

The recommended approach is a flexible collaboration network that allows Epahubb and its partners to benefit from each other's technical expertise and business networks.

The framework would include:

1. **Technical collaboration:** Partners may be engaged when their expertise is required for a project.
2. **Mutual referrals:** Each party may refer customers and business opportunities to the other.
3. **Referral commissions:** A commission may be agreed upon when a referral results in a successful transaction.
4. **Joint project delivery:** Partners may combine their capabilities to deliver projects.
5. **Commercial terms:** Fees, responsibilities, timelines and payment arrangements will be agreed upon for individual projects.

This model offers a practical way to build a network of technology professionals and businesses without requiring all parties to operate as permanent employees of Epahubb.

8. PARTNERSHIP PROPOSALS PREPARED

6.1 Proposal for Frimpong Tech – Software Development Collaboration

Epahubb proposes a strategic working relationship with Frimpong Tech to support software development projects and share technical expertise.

Under this arrangement:

- Epahubb can engage Frimpong Tech whenever additional software development expertise is required.
- Both parties can collaborate on larger software projects and share project responsibilities.
- Each party can refer potential customers and projects to the other.
- Referral commissions and project payments will be agreed upon before each engagement.

Expected outcome: Increased project capacity, access to additional technical expertise and new business opportunities for both parties.

6.2 Proposal for Lord Tech – Technology and Data Analytics Collaboration

Epahubb proposes a collaborative business relationship with Lord Tech, focusing on laptop supply, data analytics and technology-related services.

Under this arrangement:

- Lord Tech can supply laptops and related equipment for Epahubb's clients when needed.
- Both parties can collaborate on Power BI and data analytics projects.
- Epahubb can refer customers requiring laptops and hardware to Lord Tech.
- Lord Tech can refer customers requiring software development and other digital solutions to Epahubb.
- Referral commissions and project fees will be mutually agreed upon.

Expected outcome: Expanded service capabilities, increased customer referrals and additional revenue opportunities.

6.3 Proposal for Pyro Tech – Software Development Collaboration

Epahubb proposes a technical collaboration with Pyro Tech to support software development and project implementation.

Under this arrangement:

- Both parties can collaborate on software development projects.
- Epahubb can engage Pyro Tech when additional development expertise is required.
- Pyro Tech can access suitable project opportunities through Epahubb.
- Both parties can exchange customer referrals.
- Payment and commission arrangements will be agreed upon for individual projects.

Expected outcome: Improved technical capacity, shared project opportunities and stronger business relationships.
